O óleo de copra – a carne branca do coco - é usado para produzir biodiesel, um combustível renovável feito com fontes biológicas como óleos vegetais ou gorduras animais. No Karkar esse gás está ajudando escolas elétricas e hospitais bacana casino navios cargueiros leo vegetal É feita na plantação Kuli, uma grande propriedade com cerca de 980 hectares cheios por coqueiros e plantas cacauceiras que se espalham pela ilha. Derek Middleton diretor administrativo da empresa diz estar produzindo 600 mil litros a cada ano bacana casino biocombustíveis à base

do coco

O projeto começou bacana casino 2007, quando Kuliili desenvolveu uma pequena instalação para produzir biodiesel de coco. Ao longo dos anos, provou ser bem sucedido e a operação vem crescendo desde então Middleton está agora tentando garantir apoios à expansão do projecto com o aumento da bacana casino produção;

"[O combustível] é usado bacana casino Karkar nos veículos do governo, ambulâncias carros da polícia de automóveis e navios geradores", diz Middleton.

Outros países do Pacífico, incluindo Vanuatu e Fiji desenvolveram projetos semelhantes de pequena escala para o uso da biodiesel como alternativa aos combustíveis tradicionais.

Em muitos casos, o biodiesel de coco substituiu a utilização do diesel bacana casino Karkar eo combustível é vendido barato para as pessoas na ilha.

Agora, o principal instituto de ciência do país (Unitech), a Universidade PNG of Technology está pesquisando como biodiesel coco poderia ser usado mais amplamente bacana casino um combustível alternativo. Em particular estão explorando se ele pode ter sido desenvolvido e utilizado na província Madang onde Karkar é localizado especialmente nas comunidades rurais ou remotas;

Middleton diz que expandir a indústria local reduziria ainda mais bacana casino dependência de importações caras, mas garantir o apoio para aumentar as operações se mostrou um desafio.

A economista Maholopa Laveil diz bacana casino Papua Nova Guiné, desde que os investimentos sejam lucrativos e sustentáveis parceiros de desenvolvimento podem ser necessários "e o impacto social positivo seria inegável".

Transformando coco bacana casino combustível;

Transformar coco bacana casino biodiesel tem uma história na Papua Nova Guiné – assim como Madang, foi usado por forças revolucionárias de Bougainville durante a crise nos anos 80 e 90.

O processo para fazer o biodiesel envolve quebrar a copra de alta qualidade que é empurrada através das máquinas, espremer-se com óleo. É então misturado à soquete (leite) ou álcool; passa por processos químicos na criação do biocombustível diz Unitech

"É apenas diesel, mas bacana casino vez de usar petróleo bruto usamos óleo do coco no processo", diz Middleton.

Middleton diz que o biodiesel substituiu cerca de 50.000 litros por mês, mas aproximadamente 25.000 litro do combustível tradicional ainda são importados.

Atualmente todos os cocos utilizados são provenientes de Kulil. As plantações estão nas mãos da família Middleton Australian-PNG desde a década dos anos 1920, quando William Midington adquiriu após seu serviço na primeira guerra mundial agora é administrado por seus netos Derek e Brett Médion O cacau também está focado no crescimento do biocombustível bacana casino óleo para o coqueiro operação

Middleton diz que com mais financiamento o projeto poderia ver combustível suficiente produzido para abastecer a província de Madang – lar do resto da Província, cerca 500 mil pessoas. Kulii se aproximou ao governo sobre como expandir seu projecto e disse ter havido algum interesse bacana casino fazê-lo; as autoridades não responderam aos pedidos por comentários

Laveil diz que o desenvolvimento de biocombustíveis poderia trazer benefícios para a região, incluindo potencial bacana casino empregar mais pessoas desde os caminhos não qualificados e treinamento. Ele disse: "Para Madang", as vantagens imediatas seriam aumento dos impostos sobre bens ou serviços se houvessem empregados no setor".

O projeto Kulii poderia ser um exemplo para a região de forma mais ampla, diz Laveil.

descrevendo-o como "um bom modelo da transição à energia verde e uma alternativa dirigida localmente".

Ele diz que obter volume e qualidade para níveis nos quais pode ser exportado poderia levar anos, mas com o apoio do governo local deve-se factível.

"Para as fases iniciais do estabelecimento da criação de biocombustíveis, não só cocos mas açúcar e outros vejo o combustível se ele atender aos padrões industriais ou regulatório para os mercados nacionais antes que entre nos mercado internacionais", disse Laveil.
